

What others say about the **GENERIC ELECTRIC**

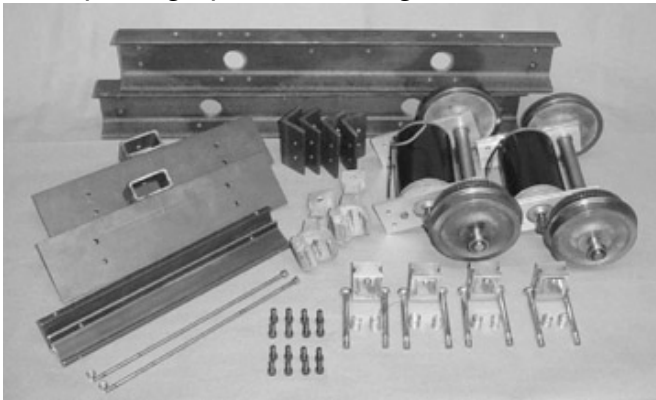

Good grief this thing is FUN. The best summary I had was that it was like actually driving a slot car.

The kit went together exactly as promised...

A lot of us like the quiet sound of the gears and motors...sounds like electrics as I remember them

You have a great product...one which certainly will provide a lot of folks a great entry into our hobby and, as several gentlemen mentioned, would be something that wives and the kids could really enjoy running.

...was picking up two ballast gondolas with the GE this morning. All

nicely coupled onto the string behind my Phlatt (with safety chains etc) and began moving forward. No

problem except for a lot of grind and squeal at the rear of the train. My brakeman apologized for failing to cut off the club's SW 1500 diesel (with slug) that I was dragging along as an unplanned caboose.

...if there were a rating for the number of grins produced per cubic inch of product the GE would be at the very top end of the scale!
