Archbar Trucks Kit

Kit
\$350

RTR
\$395

Bolt together kit. No machining required.

You supply basic hand tools, paint and some threadlocker.

Four bolt pattern of upper bolster half can turn almost anything into a car. A chunk of plywood even. (very flat car)

Wheels are machined cast iron with tread diameter of 4 & 1/8"

Pressed onto 3/4" axles, which are then fitted with sealed R8 bearings. No lubrication required.

Total width of complete truck is 11 1/2".

Top of split bolster to railhead is 4 & 3/16"

Axles are 9 & 1/4" between centers.

Total length of truck is 13 & 1/2"

Weight of each truck is about 18 lb.

Carrying capacity is easily 300 lb each truck.

(Springs bottom out at about 5/8" movement over 300 lb.)

Set your coupler height about 1/8" above normal to prevent inadvertently uncoupling at real heavy loads.

Included springplank insures good tracking and durability.

Not including painting, about one hour assembly each truck.

A delightful kit that's easy and fun to build. Will give years of service.
